

5

Invisible Sources of **WIRELESS** RF Radiation at Home

1

Cordless Phones

Like cell phones, cordless phones emit RF radiation. DECT cordless phone bases emit radiation 24/7 even when not in use. Corded phones are radiation free.

2

“Smart” Speakers

Any speaker connected to Wi-Fi or Bluetooth will emit RF radiation. Speakers connected with wires do not emit RF.

3

Wi-Fi Routers

Wi-Fi routers emit RF radiation 24/7. You can connect computers and tech with ethernet cords instead of Wi-Fi to connect to the internet without radiation.

4

Gaming Systems

Video game consoles emit RF radiation nonstop, even when not in use. Controllers also emit RF. Many systems allow you to connect with a cord, so you can turn the Wi-Fi connection off.

5

Baby Monitors & Cameras

Baby monitors emit RF radiation nonstop. Installing a wired camera system can help mitigate exposure.
